

# **UNISTRUT** Metal Framing

## **Unistrut Systems Go Anywhere!**

- **No Welding**
- **No Drilling**
- **100% Adjustable**
- **100% Reusable**

Unistrut Metal Framing is the time and money saving alternative to conventional support methods.

The Unistrut system eliminates welding and drilling and is easily adjustable, demountable and reusable

### **Unique "Weldless" Connection**

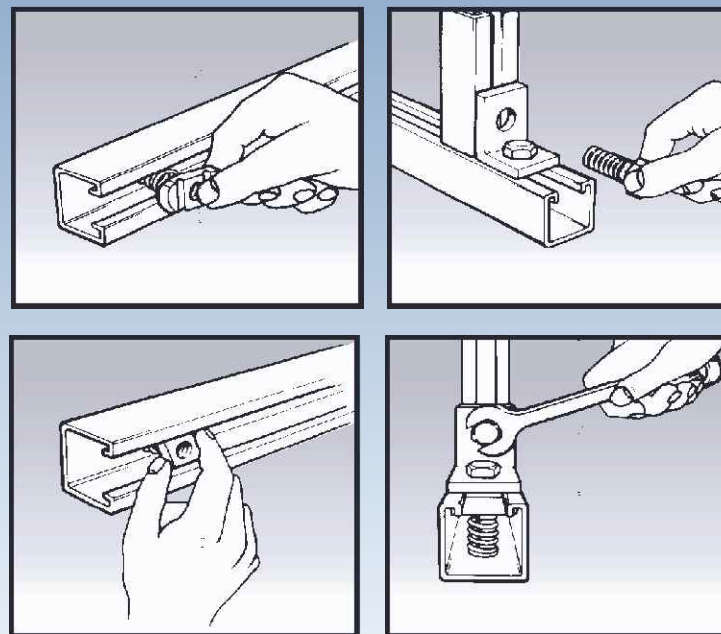

Hex-head bolt connects fitting to channel as it is threaded into spring nut

Chamfer in the nut eases starting of the bolt. Nut teeth create a strong, vice-like grip when tightened against the inturned channel edges

Channel edges and the nut's tapered grooves act as guides to provide fool-proof alignment of connection

Nut teeth grip the channel's inturned edges, tying the channel sides together in a "box" configuration for added strength

Spring allows precision placement anywhere along the channel length, then holds the nut in position while the connection is completed
